

Donor impact on care at CMH

CMH'S NEW CT SCANNER

Diagnostic Imaging produces about **100,000** images per year. That's an average of 274 images each day!

Cambridge Memorial Hospital averages **9,000** MRI scans per year.

You made it possible for me to run again.

A competitive runner for over 50 years, my friends often told me that I was the healthiest person they knew.

In 2021 my running was put on hold after abnormal blood tests. A few days later, the results of an ultrasound of my abdominal area prompted an immediate MRI at Cambridge Memorial Hospital (CMH). The Diagnostic Imaging team moved quickly and within 24 hours, I was diagnosed with liver bile duct cancer.

Although I would have preferred a different outcome, I was thankful that Diagnostic Imaging equipment and technology, including an MRI, was available in my home town.

I am grateful to CMH donors, for ensuring that our Hospital has the equipment to diagnose and deliver care, close to home.

Your impact on patients and services

New services at Cambridge Memorial Hospital, would not be possible without the equipment and technology that you helped purchase:

Regional Liver Health Centre

Region of Waterloo and Wellington County residents can now access a one-stop liver health clinic that provides diagnosis, treatment and management of advanced liver disease.

Endoscopic Ultrasound Service

CMH is currently the only hospital in the Region of Waterloo and Wellington County to offer this service. This technology is essential for the assessment and management of many gastrointestinal diseases.

Magseed

CMH is the first Hospital in the Region to use Magseed markers to assist with diagnosing breast cancer. Magseed is a tiny magnetic “seed” that is placed in a suspected tumour by a radiologist – allowing surgeons to perform more accurate excisions.
